Lesson Plans & Activities

ECOSYSTEMS

SUMMARY/OVERVIEW

Grades:

6-7

Prep Time:

1 Hour

Learning

Environment:

Outdoor & Indoor

Total Lesson

Length:

5 hours

DESCRIPTION:

This booklet introduces students to the topic of ecosystems. Activities involve outdoor exploration as well as indoor worksheets and discussion topics. Students will examine different types of ecosystems, focusing on the interaction between living and non-living things. The booklet includes 5 hours of activities, which can be delivered separately or on the same day.

CURRICULUM

EXPECTATIONS:

- Questioning and Predicting (make observations aimed at identifying their own questions about the natural world)
- Processing and analyzing data and information (experience and interpret the local environment).

BACKGROUND:

An ecosystem is a geographic area where plants, animals, and other organisms, as well as weather and landscape, work together to form a "bubble of life". Ecosystems contain biotic (living) parts, as well as abiotic factors (non-living parts). Biotic factors include plants, animals, and other organisms. Abiotic factors include rocks, temperature, and humidity.

Introduction: What is an Ecosystem?

GOAL: Students will be introduced to the concept of ecosystems.

PREPARATION: Draw 3 rectangles (vertical/portrait orientation) on the board and write the names of 3 different ecosystems at the top of each rectangle (see example on the following page).

LESSON PLAN: Ask the students which components they think are part of that ecosystem, based on the definitions below. Make sure to ask about the **INTERACTION** between the elements.

INTRODUCTION:

An ecosystem is a geographic area where plants, animals, and other organisms, as well as weather and landscape, work together to form a “bubble of life”. Ecosystems contain biotic (living) parts, as well as abiotic factors (non-living parts). Biotic factors include plants, animals, and other organisms. Abiotic factors include rocks, temperature, and humidity.

Every factor in an ecosystem depends on every other factor, either directly or indirectly. A change in the temperature of an ecosystem will often affect what plants will grow there, for instance. Animals that depend on plants for food and shelter will have to adapt to the changes, move to another ecosystem, or perish.

Ecosystems can be very large or very small. Tide pools are complete tiny ecosystems. Tide pools generally contain seaweed, a kind of algae, which uses photosynthesis to create food. Herbivores such as abalone eat the seaweed. Carnivores such as sea stars eat other animals in the tide pool, such as clams or mussels. Tide pools depend on the changing level of ocean water. Some organisms, such as seaweed, thrive in an aquatic environment, when the tide is in and the pool is full. Other organisms, such as hermit crabs, cannot live underwater and depend on the shallow pools left by low tides. In this way, the biotic parts of the ecosystem depend on abiotic factors.

The whole surface of Earth is a series of connected ecosystems!

Source: <https://www.nationalgeographic.org/encyclopedia/ecosystem/print/>

EXERCISE EXAMPLE:

Use arrows to exemplify interaction between the elements of each ecosystem!

ADDITIONALLY: Ask students to classify each word as **BIOTIC** ☆ (alive) or **ABIOTIC** (not alive)

30 mins

ACTIVITY
2. Is this an Ecosystem?

LOCATION
Indoor

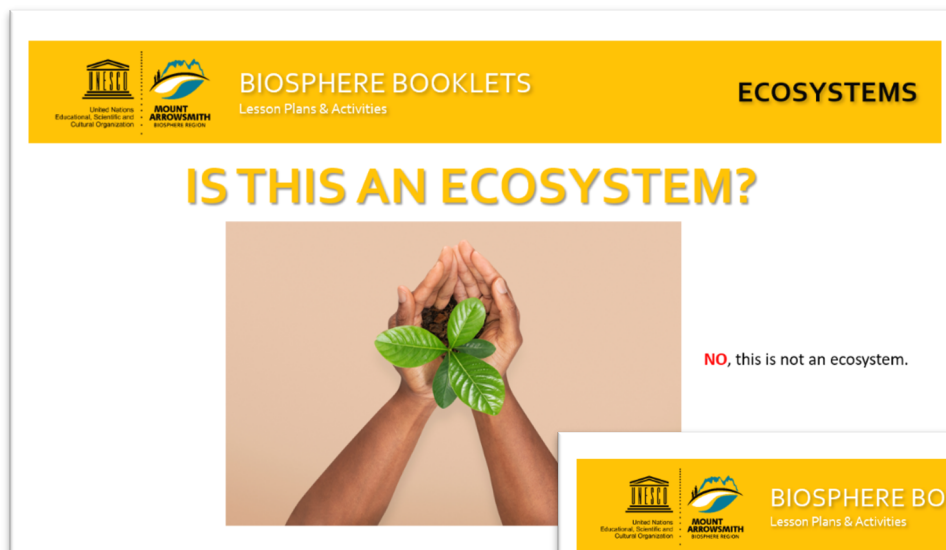

MATERIALS
Projector

Is this an Ecosystem?

GOAL: To identify which images represent an ecosystem and which ones do not - like a visual “True or False”.

PREPARATION: Download slides available.

LESSON PLAN: Go through each of the slides and ask the students to tell you if the image (or which of the images) represents an ecosystem. For each image, ask for their explanation: are there any interactions between biotic and abiotic components in this ecosystem? Are there food chains? Etc.

ECOSYSTEMS

IS THIS AN ECOSYSTEM?

YES, a tidepool is an ecosystem.

TIME

2 hours

ACTIVITY

3. Types of Ecosystems

LOCATION

Indoor

MATERIALS

Coloured cardstock, thick cardboard, scissors, glue, rulers, sharpies, coloured pencils

Types of Ecosystems

GOAL: Introduce students to the different types of ecosystems.

PREPARATION: Write the names of different ecosystems on small pieces of paper. Fold them and place them inside a bowl. Students will draw a card and base their game on the ecosystem they drew.

LESSON PLAN: Students will explore different types of ecosystems by creating a game. The game can be simple or more complex (examples below). The point is to **show the interaction** between the different components of the ecosystem.

Examples: Jeopardy/Q&A style; monopoly where different components of the ecosystem make up the properties; memory/matching game; Pictionary game where someone is given a term relating to the ecosystem and they have to draw it for the other players; charades; Go Fish card game trying to get pairs of the same parts of the ecosystem.

TYPES OF ECOSYSTEMS:

- **Tropical Rainforest** (includes canopy ecosystem and forest floor)
- **Ocean** (includes coral reefs and tidepools)
- **Wetlands** (marshes, swamps – includes terrestrial and aquatic ecosystems)
- **Deserts** (tundras are treeless polar deserts)
- **Savanna Grassland** (grass, spaced out trees, high temperatures year-round)
- **Caves** (no sunlight, water flow)

OTHERS: Montane Ecosystem, Freshwater Ecosystem, Urban Ecosystem, Estuary Ecosystem, etc.

TIME	ACTIVITY	LOCATION	MATERIALS
1.5 hours	4. Ecosystems survey	Outdoors	Printed worksheet

Ecosystems Survey

GOAL: For students to observe their surroundings and understand how it works (focus = interaction within the ecosystem).

PREPARATION: Print worksheet (page 7)

LESSON PLAN: Students will go to an outdoor place (beach, lake, river or forest) and make notes about their observations. Students will then conclude which type of ecosystem they are in, based on their gathered data.

Ecosystem Survey

At the chosen location, observe the environment around you and answer the questions below.

SURVEY INFO:

Date: ____/____/____

Time: _____

Location: _____

Surveyor's name: _____

School: _____

OBSERVATIONS:

1. Biotic (living) components: _____
2. Abiotic (non-living) components: _____
3. Type of water body: _____
4. Type of vegetation: _____
5. Does temperature fluctuate over the year? _____
6. What **PREDATOR** animals can you encounter? _____
7. What **PREY** animals can you encounter? _____
8. Do animals migrate from/to other places? _____
9. How much human presence is there? _____

TIME
30 mins

ACTIVITY
5. Conclusion

LOCATION
Indoor

MATERIALS
None

Conclusion

GOAL: For students to review/reflect on what they have learned about ecosystems.

PREPARATION: Activities 1-4.

LESSON PLAN: Ask students follow-up questions to review what they have learned.

CONTENT:

1. What is one thing you learned that **surprised** you?
2. What is one concept that was hard to **understand**?
3. Which ecosystems would you like to **visit**?
4. What human activities **threaten** ecosystems? Pollution of rivers and air, overfishing, habitat destruction, climate change, wild fires (and accidental human-caused fires) are some examples.
5. Do ecosystems have many or few **components**? Many.
